Contact
Rößler AUSTRIA is a small family-run company based in Kufstein. Since 1996, we have been producing high-quality hunting rifles that can only be „Made in AUSTRIA“.

For many years now, our TITAN® series has been popular and much sought after by hunters all over the world. The TITAN® models impress with their accuracy, simple and intuitive handling, their solid workmanship and elegant design. In short, they are weapons you can count on, yet which are also flexible and have their own personality. This is because our hunting rifles can be customized and assembled to each shooter’s exacting requirements.

We are passionate about creating high-quality hunting rifles, of which we have assembled over 30,000 so far. Hence, we have made it our mission to unite traditional workmanship with the latest technologies. This was already a priority for our company founder, Erich Rößler. We foster young talents in the promising modular field of metalworking, while at the same time employing traditional gunsmiths: A perfect combination of tradition and innovation.
ONLY THE INTERPLAY GIVES THE SUCCESS.

1. **PROFESSIONALISM**
   Building on practical experience and utilizing the latest scientific developments. All major mechanical parts of our weapons are manufactured and installed by us in-house. For this purpose, we train our own apprentices in the fields of metalworking and in the traditional profession of gunsmithing. Only by doing so can hunting rifles of the highest caliber be created – for clients who expect only the best, which is precisely what we deliver.

2. **RELIABILITY**
   Guns are highly sensitive commodities. They need to be able to function reliably in all situations: 100 %, and not a single percent less. The same applies for our customer service. By utilizing the latest production technology and keeping our staff abreast of the latest industry developments through further education courses, we ensure a high degree of satisfaction – both among our ranks and with customers.

3. **ACCURACY**
   An almost hit is still a miss. This is why we ensure that we are always fully on target. The suitability of a weapon for a hunt is determined primarily by its accuracy. Because we communicate with our customers actively on a regular basis, we constantly receive new stimuli on how to further improve our weapons. This enables us to improve the quality of our rifles and ensure that our customers are always right on target.
IT`S WHAT`S INSIDE THAT COUNTS.

WOOD
Our stocks are made of European nut wood of the highest quality. Our Italian suppliers are family-run businesses with decades of experience in the manufacturing of stocks. The wood is carefully selected and left to mature for several years. Only when it has reached the optimal moisture level is it professionally crafted into a Rößler AUSTRIA stock.

BARREL
We obtain our barrels from established German companies, which are known worldwide for the quality and accuracy of their products. Our barrels, which are hammered or drawn without cutting, are manufactured from special barrel steel. The secret of the high quality and unparalleled precision of the barrels lies in the combination of the latest technologies, traditional knowledge and exact manufacturing processes.

METAL
We procure our metals (steel and aluminum) exclusively from suppliers whom we trust and have long-standing relationships with. Our main steel components are made of tempered steel. The aluminum used is exclusively high-strength aluminum, which is also used in the aerospace industry. All the metal components we produce undergo extensive finishing procedures from our experts to ensure that they meet our exacting standards.

SYNTHETICS
Our plastic stocks are manufactured by a German plastics engineering operation that is certified according to DIN EN ISO 9001:2008. The special plastic used is composed of 30% fiberglass, which makes our stocks shatterproof and extremely rigid. This is of particular importance to our customers, because a stiffer stock results in a more precise weapon.

ASSEMBLY
The final assembly of our weapons is performed by highly-trained gunsmiths with years of professional experience. We have a robust cross-checking system in place for complete quality control. Mr. Rößler personally performs the final inspection of each weapon after it is assembled and given a first inspection by our craftsmen. Our products only leave our premises if Mr. Rößler has tested and confirmed the perfect functioning and condition of the weapon.

WORK PHILOSOPHY
Why settle for good when you can have better? We are continually optimizing our work processes, our techniques, and our know-how in order to improve our products. We pay great attention to detail without losing sight of the big picture. We are open to suggestions and constantly challenging ourselves to do better. The team discusses working methods and processes weekly.
SHOW CHARACTER.
SUPERIOR SAFETY
All TITAN® products are bolt-action hunting rifles with classic rotary bolting devices. The three, six, or sixteen locking lugs of the bolt lock directly into the barrel and thus represent the most secure locking system in this weapon category. The large contact surface through the high number of locking lugs ensures optimal safety.

EXTREME SPEED
Better customization equals more success. The firing pin is cocked using a double tension guide, allowing for quick and easy bolt action. The ignition time of 1.6 milliseconds is one of the fastest in the world. The comfortable and fast loading and unloading of the weapon via the clip magazine increases your speed in any hunting situation, giving you a distinct advantage.

CUSTOMIZED VARIANTS
More choice: Individually assemble your TITAN® product by selecting from a wide range of options. In addition to hundreds of different barrel combinations, you can select from different surface finishes, triggers, sights and much more. If you are unable to find your dream weapon from among our standard offerings, Rößler AUSTRIA would also be glad to fulfill any special requests. For more information and to view all variants, please have a look at our Configurator at www.titan6.com.

HIGHEST PRECISION
Get the most out of your rifle. The reliability of TITAN® rifles and their shooting precision bear testament to the excellent quality of their manufacturing process and the materials used. By utilizing the latest technology and collaborating with partners with a long tradition and expert know-how, we manufacture according to the highest quality standards. The positive media reporting, customer satisfaction and our continued achievements on the international market prove the success of our concept each and every day.

GREAT FLEXIBILIT
steps, you can modify the caliber of your weapon to suit the hunting conditions. Hence, all you require is a single bolt-action rifle to be well-equipped for both raised hide and drive hunts.
STOCK
Choose from eighteen different stocks, which come in a range of different materials, designs and finishes.

SAFETY
The sliding safety catch is comfortably located at the stock wrist and can be operated almost entirely silently.

RECEIVER
The receiver is made of high-strength anodized aluminum and available in black or silver. Left-handed versions are available for nearly all models.
Rifles as they should be: sleek, reliable, and accurate. Our classic TITAN 3® and TITAN 6® rifles have impressed hunting enthusiasts for over a decade with their superior technology, perfect handling and timeless design.

When every second counts: These bolt-action rifles contribute significantly to the success of and suitability for a hunt with their intuitive handling in the crucial seconds before a shot.

No hunt is quite like the other and every hunter has his own unique requirements. We offer our TITAN 3® and TITAN 6® rifles in all major calibers, ranging from .222Rem. to .375Ruger in order to do justice to the most diverse hunting situations and each hunter’s individual needs.

TITAN® marksmen have not only celebrated numerous successes on hunts, but also sport shooting victories all over Europe. This success spur us on. Hence, we have also added sportive target stocks to our product range.

**Caliber**
All major calibers from .222Rem. to .375Ruger are included in the standard range.

**Barrel**
The barrel is made of special barrel steel and is available in a burnished or stainless steel look. Fluted barrels and special twist rates are available on request.

**Trigger**
Both single set and shotgun triggers are available for your rifle.

**Magazine**
The pressure mechanism of the magazine inserts makes it easy to load and unload your rifle. Depending on caliber, magazines with 2 to 5 round each are available.

**Interchangeable Barrel**
The technology with which the barrel is fixed at the receiver allows for the barrel to be swapped quickly and easily.
**TITAN 3® | TITAN 6®**

### Variable Interchangeable Barrel System

When purchasing an interchangeable barrel for the Titan 3® or Titan 6®, make sure that the caliber matches the bolt. If the desired caliber belongs to a different bolt locking mechanism group than the current caliber, remember to order a matching bolt. As the stock and receiver of the Titan 3® and Titan 6® rifles have an identical construction, switching from a Titan 3® caliber to a Titan 6® caliber, and vice versa, is no problem at all.

STOCK
Choose from nine different stocks, which come in a range of different materials, designs and finishes.

SAFETY
The sliding safety catch is comfortably located at the stock wrist and can be operated almost entirely silently.

RECEIVER
The receiver is made of matt burnished steel, making it particularly resistant to the elements.
The TITAN 16® is a straight-pull bolt-action rifle that combines classic elements of the TITAN 3® and TITAN 6® with the highest safety standards of a straight-pull mechanism. This mechanism was developed especially for hunting situations that require a combination of maximum speed and the highest precision.

This makes it possible to continuously keep game in the sights while reloading at the same time. The combination of a straight-pull mechanism with the special Rößler AUSTRIA rotary bolting mechanism guarantees the shooter the best possible conditions for a successful hunt.

The reloading action is highly ergonomic, made for especially easy handling. The semi-gloss look of the barrel and the receiver imparts outstanding elegance and emphasizes its premium quality, while the carbonitrided and oxidized barrel-surface provides long-term resistance from rust.

As with all TITAN® products from Rößler AUSTRIA, the TITAN 16® can be individually configured to meet your personal requirements from an extensive range of calibers.

**CALIBER**
All major calibers from .243Win. to .375Ruger are included in the standard range.

**BARREL**
The barrel is made of special barrel steel and receives a carbonitrided and oxidized finish.

**TRIGGER**
The TITAN 16® is equipped with a shotgun trigger.

**MAGAZINE**
The pressure mechanism of the magazine inserts makes it easy to load and unload your rifle. Depending on caliber, magazines with 2 to 5 round each are available.

**INTERCHANGEABLE BARREL**
The technology with which the barrel is fixed at the receiver allows for the barrel to be swapped quickly and easily.

### VARIABLE INTERCHANGEABLE BARREL SYSTEM

In the TITAN 16®, the barrel and bolt always form a single unit. When you purchase an interchangeable barrel for the TITAN 16®, the corresponding bolt will also be provided. Please check the magazine group tables to see whether the magazine will need to be substituted.

TITANalpha®
Burnished & Stainless
Sometimes, less is more. Like the TITAN 3ª and TITAN 6ª, the TITANalpha® is characterized by professional workmanship, reliable technology and accuracy that can only be “Made in AUSTRIA”.

Because we have left out a few options for the TITANalpha® – for example, the calibers are fixed and there are less stocks to choose from – we can offer this rifle at an unbeatable price-performance ratio.

The TITANalpha® is our entry-level model and the optimal choice for all hunters and marksmen who are looking for the best quality at an excellent price.
TECHNICAL DATA TITANalpha®

BARREL
Special rifle-barrel steel; barrel length: short- and standard-caliber 560 mm, medium-caliber 610 mm; this firearm is designed for interchangeable barrels.

CALIBERS
.25-06Rem. | 6.5x55Se | .270Win. | 7x64 | .308Win. | .30-06Spring. | 8x57IS | 7mmRem.Mag

STOCK
Polymer; recoil absorbing rubber butt plate, checkering on the pistol grip and fore-end, sling swivel.

BOLT
Symmetrically arranged 3-lug bolt; locked directly in the barrel with only 60° bolt lift; short strike distance for an extremely short lock time of only 1.6 milliseconds; double tension guide for comfortable repeating.

TRIGGER
Fine trigger or set trigger; short, dry trigger; adjustable trigger travel and trigger weight; direct acting trigger travel distance, set to 0.3 – 0.5 mm trigger path.

SAFETY
Ergonomically shaped 3-position safety catch (shotgun trigger) or 2-position safety catch (single set trigger) on the grip; triple action with tab and bolt knob on the trigger, sear and bolt.

MAGAZINE
Removable stack magazine for 2 round with medium-calibers and 3 round with short and standard-calibers; extended magazine +2 round at extra charge.

TELESCOPIC SIGHT ASSEMBLY
Assembly with tapped holes 6-48 UNS prepared on receiver; assembly parts are special accessories (at extra charge).

WEIGHT
approx. 2.9 kg

MUZZLE BREAK
The TITAN® muzzle brake is designed according to the latest state of the art for hunting and made of high-quality steel. Its carbonitrided, black oxidized finish provides long-term protection from the elements. Recoil has been reduced by up to 50 percent, and noise and dust emissions are almost entirely deflected away from the shooter by the arrangement of the radial bores.

MAGAZINE
Loading and unloading the weapon is quick and simple thanks to the magazine insert. Depending on the selected caliber, the standard magazine contains either 2 or 3 round. The optionally available drive hunt magazine increases the load capacity by +2 round.

MONOGRAM PLATE
Your TITAN® can be personalized with a monogram plate. Upon request, we can engrave your initials on the plate. You can also order a blank plate for your own personalization.

STOCK CARE
Our stock caring oil is a composition of special cleaning and care components containing natural orange oil. It creates a well-maintained, fresh surface with an enhanced structure. It makes scratches and scars invisible and removes water marks and keeps all treated surfaces elastic. Use this oil regularly to care for your stock.
Original Accessories

**RÖSSLER AUSTRIA RIFLE CASE**
The Rössler AUSTRIA rifle case is made from shock-resistant polypropylene. On one side of the rifle case there is a two-colour print of the Rössler AUSTRIA logo. It comes into its own on the simple black design of the case. The foam inlay is perfectly fitted in the case and gives the best protection for your TITAN. The case is closed by four latches and the additional possibility of mounting a padlock means a maximum of security.

**NEW ACCESSORIES**

**BIPODS**
The „ultra-light“ bipod can rapidly be mounted and dismounted from our rifles. It is simply clipped onto the sling swivel screw, and the legs are extended via springs. Its height is adjustable at 1-inch increments.

**SIGHTS**
The elegant TITAN® sights are available in 4 different versions. Made of metal with a high-quality finish, they perfectly complement your weapon’s profile.

**INTERCHANGEABLE BARRELS**
All TITAN® bolt-action rifles have an easy and rapid barrel changing system. This is a big plus for hunters who want to use the same weapon both for raised hide as well as drive hunts. Our interchangeable barrels are available in all calibers of our product line.

**MOUNTING BASES**
Upon request, your TITAN product is factory provided with already-assembled two-piece Picatinny mounting bases or a standard Picatinny rail out of anodized aluminium or burnished steel. For sports shooting there is also the option of a Picatinny rail 20MOA made from steel.

**BREECHBLOCK**
The TITAN 3® and TITAN 6® can be optically enhanced with a fluted bolt. The advantages of the helical run of the fluting are particularly evident during reloading. In addition, due to less friction from a reduced surface area, reloading takes place more gently. Are you more of a sport shooter than a hunter? Maybe the tactical bolt handle is an interesting option for you then!

**RIFLE SLING**
Through the wide and soft Neoprene component, the Rössler AUSTRIA rifle sling provides great comfort with controlled stretch and ultimate shock absorption. The non-slip grip backing on reverse secures the sling on the shoulder. The used materials guarantee a silent handling of the gun and give great stability. The integrated, stageless lengthwise adjustment offers the perfect length for everybody!
